

Polartide is an unusual participatory carillon concert about sea water level change. To play along, load the website “[polartide.org](http://polartide.org)” on your smart phone or tablet. Press the “tempo” button to advance the performance. The composition is based on sea water level data from 1993-2014.

Carillonist Tiffany Ng will play the music exactly at the tempo of your clicks. But you are not alone. Can you create order out of chaos by clicking in concert with others? Have fun exploring!
